	Claims	1-6, 16, 20, 28-31, 34	N
Inventive step (IS)	Claims	7-15, 17, 19 , 21-27, 33	Y
	Claims	1-6, 16, 20, 28-31, 34	N
Industrial applicability (IA)	Claims	1-17, 19-31, 33	Y
	Claims		N

- 2. Citations and explanations (Rule 70.7)
 - 1. The present report refers to the following documents:

D1: WO 99/58478 A

D2: WO 01/35957 A

D3: WO 00/12070 A.

2. Novelty

The present application does not satisfy the requirements of PCT Article 33(1) because the subject matter of claims 1-6, 17, 21, 29-32 and 35 is not novel within the meaning of PCT Article 33(2).

Document D1 discloses compounds of the general formula (I) according to claim 1, which are 90 to 99% pure (see example 3aa, in particular page 60, lines 13-15, and page 62) and their use for the treatment of incontinence (see the abstract and pages 35-36). The subject matter of claims 1-6, 16, 20, 28-31 and 34 is therefore not considered novel.

International application No.
PCT/EP2004/003567

Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

The method according to claim 7 is not suggested by documents D1 and D2 and is therefore likewise considered novel.

3 Inventive step

According to the application the aim of the invention (see the description, page 3, line 29, to page 4, line 2) is to provide high-purity, free bases of 3,3-diphenylpropylamines of formula (I), which are suitable for transdermal or transmucosal use.

Document D1 already discloses high-purity, free bases of 3,3-diphenylpropylamines suitable for transdermal use and document D2 (see pages 2-3 and 28-32) discloses the crystalline salts of formula (II), presenting high stability and high purity.

The method according to the novel claim 7 is not suggested by the teaching of documents D1 and D2 and therefore considered inventive.

INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No.
PCT/EP2004/003567

Box No. VIII Certain observations on the international application

The following observations on the clarity of the claims, description, and drawings or on the question whether the claims are fully supported by the description, are made:

The expression "suitable release reagent" used in claim 7 is vague and unclear and leaves the reader in doubt as to the meaning of the corresponding technical feature (release reagent). As a result, the definition of the subject matter of this claim is unclear (PCT Article 6).

The release agent should be clarified according to claim 8.

In addition, an unclear expression cannot be used if this expression, as in the present case, is essential for the delimitation of the invention with respect to the prior art with regard to novelty and inventive step.

INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

Supplemental Box

In case the space in any of the preceding boxes is not sufficient.

Continuation of:

Box III

Non-establishment of opinion with regard to novelty, inventive step and industrial applicability

- 1. Claim 34 relates to a subject matter which, in the opinion of the Examining Authority, falls under PCT Rule 67.1(iv). Consequently, no opinion with regard to industrial applicability is established in respect of this subject matter (PCT Article 34(4)(a)(i)).
- 2. The valid claims 18 and 19 (in part) are directed to a product which is defined by means of the following parameter: P1: stabilizing factor (equals to at least 2).

In the present context the use of this parameter would appear to constitute a lack of clarity within the meaning of PCT Article 6. It is not possible to compare the parameter chosen by the applicant with the relevant disclosure in the prior art. The lack of clarity is such that it makes it impossible to carry out a full, meaningful search. Consequently, no examination can be carried out. Claim 19 is dependent on claim 18 and contains an additional parameter. The search of claim 19 was therefore restricted to a product having this parameter.

3. The valid claim 32 relates to a use, characterized by a desirable property, that is to say, a polymer layer which delivers fesoterodine through human skin at a flux

International application No.
PCT/EP2004/003567

Supplemental Box

rate of 3-15 mg/day. The claim therefore comprises all uses having this property, whereas the description of the application supports only a limited number of such products (PCT Article 5). In the present case the claims lack the proper support and the application lacks the requisite disclosure to such an extent that it does not appear possible to carry out a meaningful search covering the entire range of protection sought. In addition, the claim also lacks the clarity required under PCT Article 6, since it attempts to define the use in terms of the result to be achieved. The lack of clarity is such that a full, meaningful search is not possible. Consequently, no examination is possible.
